

BEHAVIORAL HEALTHCARE REDEFINED

Mentis Health Solutions (Mentis) unites behavioral health services, clinical staffing and programming, and purpose-built normative residences into a fully integrated, accountable solution, accelerating access to treatment, reducing backlogs and recidivism, and improving outcomes.

Communities and institutions across the nation are facing a growing behavioral healthcare crisis, which has led to significant treatment delays, bed shortages, and a lack of therapeutic environments for effective treatments.

- Wait times and costly backlogs are growing
- Individuals are often treated in non-therapeutic environments
- Current models are slow to deliver, costly, and fragmented
- Care providers struggle to expand capacity
- Risk is increased

When care is delayed or unavailable, individuals suffer, communities are affected, and institutions absorb the strain.

A FIRST-OF-ITS-KIND CARE DELIVERY MODEL

Mentis was created to replace outdated behavioral health models with a faster, more effective, and more dignified way to deliver care in communities.

Rather than seeing facilities, staffing, and behavioral health services as separate challenges, Mentis brings them together into an end-to-end solution, delivering behavioral health beds and services in months rather than years, while improving outcomes and transitions into the community.

IMMEDIATE, MEASURABLE IMPACT

Faster, more timely, and cost-effective evaluation and treatment

Reduced wait times, backlogs, and recidivism

Improved clinical outcomes and re-entry into communities

Expanded capacity without multi-year build timelines

Reduced strain on jails, prisons, and state hospitals

These facilities and programs support cost recovery by reducing state hospital admissions and easing pressure on local jail systems.

Mentis replaces unnecessary incarceration and extended hospitalization with continuity of care that supports recovery, dignity, and system stability.

COMPREHENSIVE CLINICAL CARE

Care is delivered 24/7 by experienced, multidisciplinary teams and supported by structured, evidence-based services and programs, including:

- Clinical assessments and psycho-legal evaluations
- Competency restoration programming
- Individual and group therapy
- Medication management
- Substance use counseling
- Life skills and psychoeducation
- Discharge planning and re-entry support

DESIGNED FOR REAL-WORLD SYSTEMS

Our highly adaptable solutions can be tailored based on population, acuity, and jurisdictional requirements. The Mentis model supports individuals across the full continuum of care, from crisis and stabilization through treatment, competency restoration, transition, and community reintegration.

Mentis also offers integrated competency restoration programs to start the treatment journey immediately for justice-involved individuals as they transition into the Mentis facility. With over 60,000 individuals evaluated annually for competency to stand trial, Mentis addresses the growing backlog for these essential services, allowing individuals to move forward in a timely manner while receiving treatment.

THE MENTIS DIFFERENCE

Mentis helps communities respond to growing behavioral health demands with scalable, patient-centered solutions. Together with our trade partners, Centurion Health and ModCorr, Mentis expands access to high-quality behavioral health treatment across the United States, where it is needed most.

Centurion Health is a leading national provider of comprehensive behavioral healthcare services with decades of experience providing an array of solutions specific to large populations. ModCorr, a pioneer in modular design-build, enables the rapid deployment of purpose-built behavioral health facilities in a fraction of the time required by traditional construction.

Mentis sets a new standard: purpose-built for modern demand and designed to work where traditional models fall short.

This is behavioral healthcare, *redefined.*
